# Introduction

## Highlight examples

### Plaintext

```
Pre-formatted plaintext.
```

### Bash

```
echo "Pre-formatted inline bash script." && exit 0
```

### Python

```
if print('Pre-formatted inline {} script.'.format('python')):
    return
```

### Highlighting specific words

To highlight specific words, use `<span class="hl">text</span>`, as such:  
Let's **highlight** the word **highlight**.

```
It can even be made to work within pre-formatted blocks!
```

As well as inline pre-formatted fields!

### Notes, warnings

Please Note: this is some **important** stuff!

## Using anchors

These are local hyperlinks to the examples found under [Including file contents](#):

- [example.sh](#)
- [example.py](#)

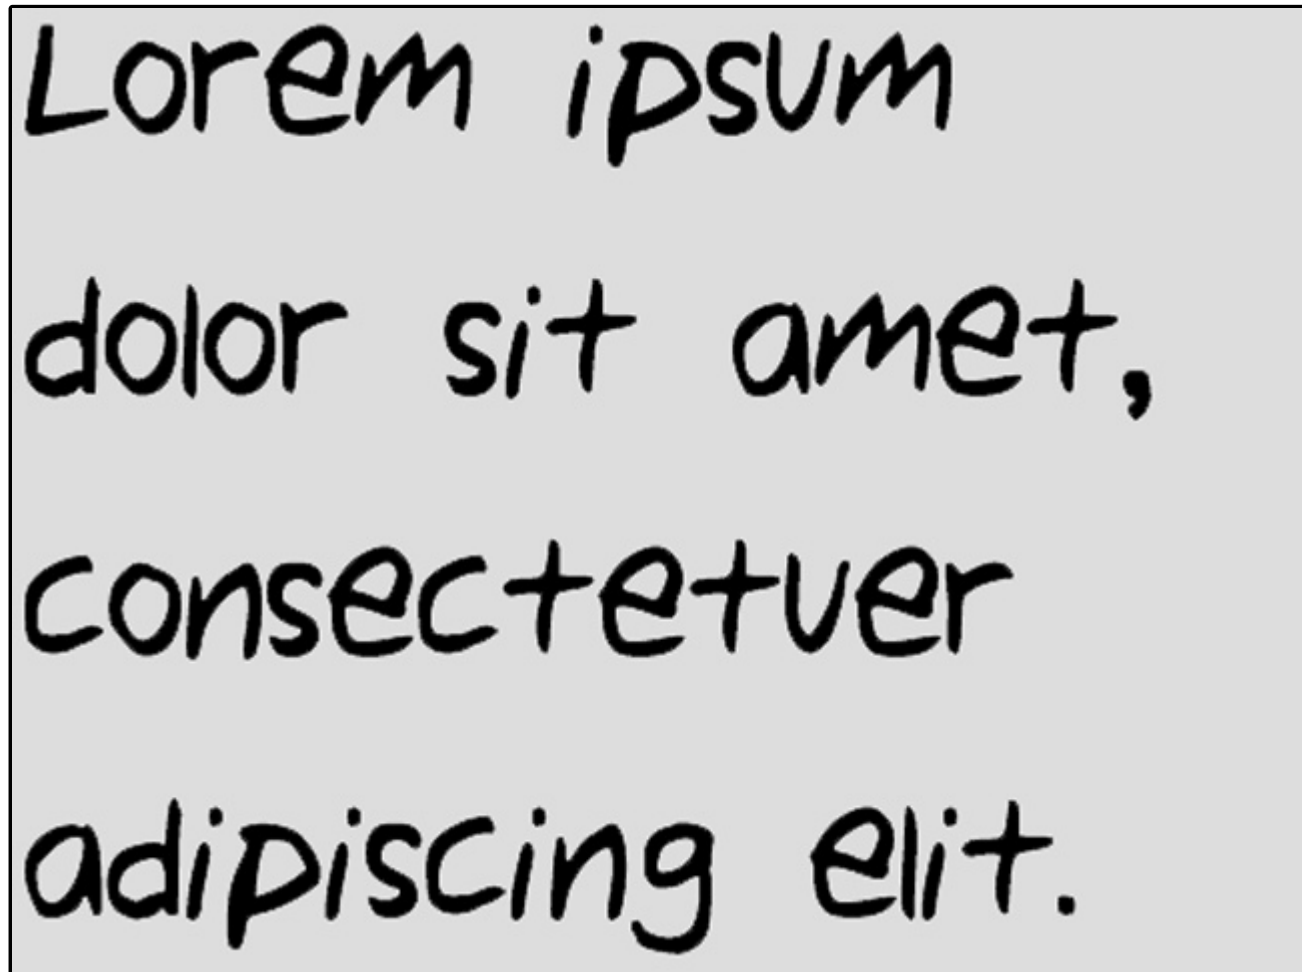

## Creating tables

Header 1	Header 2
some	stuff
more	<b>highlights</b>

---

Header 1	Header 2	Header 3
left	center	right

## Including images

*Handwriting*, by Andrew Allingham, sourced from <https://www.flickr.com/photos/aallingh/8197626825> and shared under [CC-BY](#).

## Including file contents

### example.sh

```
#!/bin/bash

echo "Shell script example"
exit 0
```

### example.py

```
#!/usr/bin/python3

print('Python example')
```

## Including specific lines from files

### The line after line 9.

```
...
line 10
...
```

### The lines after lines 1, 3, and 5.

```
...
line 2
...
line 4
...
line 6
...
```

The lines after line 7 up to, and including, line 10,  
and the lines after line 21 up to, and including, line 24.

```
...
line 8
line 9
line 10
...
line 22
line 23
line 24
...
```

All lines after line 26.

```
...
line 27
line 28
line 29
line 30
```

All lines before, and including, line 4.

```
line 1
line 2
line 3
line 4
...
```

Including line numbers

The lines after line 7 up to, and including, line 10,  
and the lines after line 21 up to, and including, line 24.

	...
8	line 8
9	line 9
10	line 10
	...
22	line 22
23	line 23
24	line 24
	...

All lines after line 26.

	...
27	line 27
28	line 28
29	line 29
30	line 30

All lines before, and including, line 4.

1	line 1
2	line 2
3	line 3
4	line 4
	...

With syntax highlighting

	...
3	<code>print('Python example')</code>
